

Product Sales Analysis Report

Executive Summary

This project analyzes retail product sales data using Microsoft Excel to identify revenue drivers, profit trends, top-performing products, and regional performance.

Business Questions

- Which categories generate the highest revenue?
- Which categories are the most profitable?
- What are the monthly sales trends?
- Which regions contribute the highest profit?

Dataset Overview

The dataset contains product sales transactions, product categories, revenue, profit, regional information, and monthly performance metrics.

Data Cleaning & Preparation

Checked for missing values, validated data types, standardized formats, and prepared data for dashboard reporting.

KPI Summary

Revenue: \$10,080,664

Profit: \$1,988,095

Unit Price: \$5,377,370

Margin: \$3,278

Key Findings

Electronics generated the highest revenue. Home & Furniture showed strong profitability. Apple products dominated the Top 10 Products ranking.

Recommendations

Increase inventory for top-performing products, focus marketing on high-revenue categories, and continue KPI monitoring.

Conclusion

This project demonstrates data cleaning, dashboard creation, KPI reporting, business analysis, and recommendation development.
